Forging Industry Launches New Online Job Service

CLEVELAND, OHIO — The Forging Industry Association (FIA) announces the launch of its interactive job board, the Forging Career Center with its focus on forging industry companies, the Forging Career Center offers its members—and the forging industry at large—an easy-to-use and highly targeted resource for online employment connections.

“We’re very excited about the Forging Career Center because we know how critical it is for employers in the forging industry to attract first-rate talent with a minimum expenditure of time and resources,” said Roy Hardy, Executive Vice President for FIA.

Both members and non-members can use the Forging Career Center to reach qualified candidates. Employers can post jobs online, search for qualified candidates based on specific job criteria, and create an online resume agent to email qualified candidates daily. They also benefit from online reporting that provides job activity statistics.

For job seekers, the Forging Career Center is a free service that provides access to employers and jobs in the forging industry. In addition to posting their resumes, job seekers can browse and view available jobs based on their criteria and save those jobs for later review if they choose. Job seekers can also create a search agent to provide email notifications of jobs that match their criteria.

An added benefit for both employers and job seekers is access to the Engineering & Science Career Network (ESCN), a growing network of leading engineering and science associations. FIA’s alliance with the ESCN increases employers’ reach to over 15,000 resumes, as well as job seekers’ reach to hundreds of job postings. The ESCN includes leading engineering and science societies such as the ASM International, ASME and American Society for Quality.

About FIA - Forging Industry Association, Cleveland, Ohio, is comprised of 112 North American producers of forged metal components, accounting for approximately 75% of the custom forging volume produced annually in North America. Forged metals parts are pressed, pounded or rolled into countless configurations and used for critical applications in the aerospace, automotive, construction, materials handling, ordnance, hand tool, agricultural and industrial equipment industries -- to name a few! In addition, 82 firms supplying equipment, materials, services or supplies to the industry are also members of FIA. The Association, with its predecessor organizations, has served the metal forging industry since 1913.
