Chester J. Van Tyne was the FIERF (Forging Industry Education and Research Foundation) Professor at Colorado School of Mines in Golden, CO for 28 years. He received his undergraduate and graduate degrees from Lehigh University and worked for Bethlehem Steel as a research engineer for a short period before joining Lafayette College in the Metallurgical Engineering Department as a professor in 1980. In 1988 he joined the Metallurgical & Materials Engineering Department at CSM. He retired from CSM in 2016. He continues to work half time at CSM and half time as a visiting scholar at Virginia Tech. His research interests are in the metal deformation processes especially forging, sheet metal forming and friction during metalworking operations.
